

M829 / M829A1 / M829A2

American Ordnance LLC, operator of the Iowa and Milan Army Ammunition Plants, produces the Cartridge 120mm M829, M829A1 and M829A2 Tank ammunition for the U.S. Army, Marines and other State Department approved customers.

USE: This cartridge is an Armor Piercing, Fin Stabilized, Discarding Sabot w/ Tracer (APFSDS-T) kinetic energy, armor-piercing round for use in the 120mm smooth bore M256 cannon.

DESCRIPTION: The complete round contains a propulsion system consisting of a case base with a combustibile cartridge case, stick propellant within a containment device to prevent spillage, and a primer. The projectile consists of the sub-projectile and aluminum or composite sabot. The depleted uranium penetrator is a one-piece design which is assembled into the sabot by means of grooves. There is a six-blade aluminum fin with tracer assembly fitted to the rear of the sub-projectile and a windshield fitted to the front. For training use, the M865 is provided (see M865 data sheet).

SPECIFICATIONS:

	M829	M829A1	M829A2
Length:	36.8in	38.75in	38.74
