

M795

American Ordnance LLC, operator of the Iowa and Milan Army Ammunition Plants, produces the Projectile, 155mm High Explosive ammunition for the U.S. Army, Marines and other State Department approved customers.

USE: The M795 projectile is utilized to provide conventional support fire for division/corps elements.

DESCRIPTION: The M795 projectile consists of TNT explosive loaded into a body assembly. A gilding metal rotating band encircles the high fragmentation steel HF-1 body near its base. The obturator is plastic. The projectile is fitted with a protective lifting plug at the nose and a flexible rotating band cover which protects the rotating band during shipping and handling.

SPECIFICATIONS:

Length: 33.2 in
Weight: 103.4lbs
