

M864

American Ordnance LLC, operator of the Iowa and Milan Army Ammunition Plants, has the capability to produce the M864 for the U.S. Military and other State Department approved customers.

USE: The M864 projectile is capable of delivering 24 M46 and 48 M42 dual-purpose anti-materiel/anti-personnel grenades at ranges out to 29 kilometers. The expulsion charge is fitted in the ogive of the projectile and is initiated by a standard-type mechanical or electronic time fuze. Extended range capability is provided both by the streamlined shape of the projectile and by a base bleed propellant grain located in the aft end of the projectile.

DESCRIPTION: The M864 projectile is a dual-purpose ICM projectile that incorporates base burn technology to increase its range. Base burn technology was developed to reduce the amount of base drag on a projectile, thereby increasing the achieved range.

155mm, M864 DPICM
